

Six-Sided Machining  
**SP**FINE

Capabilities

**ESCHMANNSTAHL**

## More Efficiency through Outsourcing!

The brand **SPFINE** of the service portfolio special plates (**SP**) stands for an efficient six-sided machining with fine-milled surfaces integrated into the sawing process. It is a cost-effective alternative to the ground finish and is available for all materials in our ex-stock list.

By outsourcing this service you no longer have to hold available personnel and machine capacity. As our customer you will be saving time and money. Contact us to find out how to do this and how much you can save.

### 1 Incoming Order

An exact documentation of the entire order workflow guarantees a smooth execution of your project.

### 2 Material Allocation

A big materials warehouse with all standard dimensions ensures a quick processing of your order.

### 3 Sawing

All blanks are individually tailored to customer demands.

## Overview of Your Advantages

- Six-sided milled pieces with chamfered edges
- Supporting surfaces fine-milled
- Flexible dimensional range
- High precision
- Cost-effective and efficient
- **Economically attractive alternative to ground p-plates**
- **With almost nationwide coverage in Germany, we deliver the entire dimensional range in approximately four working days. Please contact our sales staff.**

## Technical Information

### Tolerances

Thickness	Width	Length	Ra	Edges
-0 / + 0.1 mm	-0 / + 0.2 mm	-0 / + 0.2 mm	0.8-1.6	deburred

### Dimensional Range

#### 4 Milling

The blocks are machined on all six sides and the edges are neatly deburred.

#### 5 Quality Control

Dimensional accuracy is thoroughly checked and documented prior to shipping.

#### 6 Shipping

You benefit from short delivery times via optimized logistics and reliable partners.
